Operations & Customer Experience Executive | Cover Letter

Dear Hiring Manager,

I am an Operations and Customer Experience executive with **over 20 years** of experience building and scaling mission-critical operational organizations across **SaaS, cybersecurity, and fintech** — serving Fortune 100 enterprise customers, managing multi-million-dollar operational budgets, and leading distributed teams across **7 countries**. I am writing to express my interest in senior operational leadership opportunities where execution rigor, customer accountability, and organizational scalability are central to the role.

Throughout my career I have operated at the intersection of strategy and execution — trusted by CEOs and founders to translate vision into operational reality. At **MoovingOn**, as VP Operations, I owned the full operational budget alongside the CFO, built a 24/7 NOC from scratch, established an Account Management function, and led ISO 27001 governance across the organization. At **Radware**, following its acquisition of SecurityDAM, I led the integration of multiple operational units into a unified global follow-the-sun model — delivering measurable outcomes that transformed how the organization served its most sensitive enterprise customers.

Resolution Time: Reduced TTR from **~48 hours** → **~6 hours** through operational restructuring, escalation governance, and knowledge enablement

First Contact Resolution: Increased FCR to **~75%**, transforming the NOC into a high-capability operational response organization

Industry Recognition: Contributed to improving global service ranking from **#7** → **#1**, with positive positioning in Forrester Research evaluations

Organizational Scale: Built 24/7 support organizations from **6** → **20+ engineers** across multiple companies and regions

My leadership is grounded in three principles: **ownership, visibility, and customer trust**. I build systems that make underperformance visible early, escalations predictable, and customer commitments measurable. Executive leadership has consistently described me as the kind of operational partner who creates peace of mind — allowing CEOs and founders to focus on growth, knowing the operational domain is fully under control.

I bring a **technical foundation** (Computer Science and Mathematics) combined with deep experience across the full operational stack — from NOC and support engineering to Customer Success, Account Management, KPI governance, budget ownership, and post-acquisition integration. I am equally comfortable designing operational systems and representing operations in executive-level commercial conversations. I am available immediately and welcome the opportunity to discuss how my background aligns with your organization's operational priorities.

Sincerely,

Amir Paluch

Operations & Customer Experience Executive
